Coding & Solution

Date	13 November 2026
Team ID	0157CS241131
Project Name	AI Travel Itinerary Planner (Trip Genius AI)
Maximum Marks	5 Marks

Solution Summary

Field	Details
Repository Link / URL	https://github.com/ProGraMMer-Parth/travel-itinerary-planner
Live Application	https://travel-itinerary-planner-sage.vercel.app
Programming Language(s)	TypeScript, Python, SQL, CSS
Framework(s) Used	React 19, Vite 6, FastAPI, Pydantic
Key Features Implemented	AI itinerary generation (Groq), planner form with validation, day-wise itinerary view, Supabase signup/login/session restore/logout, save trip, My Trips (list, open, rename, delete), PDF export, demo mode, row-level security, automated backend tests, Vercel + Render deployment
Pending / Incomplete Features	Google Maps, live weather, hotel/flight booking, expense tracker, share/collaborate, in-place activity editing (future scope)
Setup / Run Instructions	**Backend:** `cd backend`, create venv, `pip install -r requirements.txt`, copy `.env.example` to `.env` and add keys, run `uvicorn app.main:app --reload` (port 8000). **Frontend:** `cd frontend`, `npm install`, copy `.env.example` to `.env`, run `npm run dev` (port 5173). **Database:** run `backend/database/schema.sql` in the Supabase SQL editor. **Tests:** `cd backend && pytest`

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Partial
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes (live deployment available)
6	Code is committed to a version control repository	Yes (GitHub)

Additional Notes / Comments

The Groq key and the Supabase service-role key are kept only in backend environment variables. The frontend uses only the public Supabase anon key. The backend tests use mock Groq and Supabase responses, so they run without internet or API keys.
