Project Executable Files

Date	13 November 2026
Team ID	0157CS241131
Project Name	AI Travel Itinerary Planner (Trip Genius AI)
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (backend/database/schema.sql)	Yes
5	Environment configuration file (.env.example)	Yes (frontend and backend)
6	Deployed application URL	Yes
7	APK / Executable binary	NA (web application)
8	Dockerfile / Containerization config	NA (not used)
9	Test files and test results	Test files: Yes; results: TO ADD
10	Demo video or walkthrough	NA (live deployment provided instead)

Step 2: File / Folder Structure

```
travel-itinerary-planner/
├── README.md
├── frontend/
│   ├── package.json, vite.config.ts, tsconfig*.json, .env.example, index.html
│   └── src/
│       ├── App.tsx, main.tsx, index.css
│       ├── pages/      HomePage, PlannerPage, ItineraryPage, MyTripsPage
│       ├── components/auth/AuthModal.tsx
│       ├── layouts/AppLayout.tsx
│       ├── hooks/useAuth.tsx
│       ├── services/   api.ts, supabase.ts
│       ├── utils/pdfExport.ts
│       └── types/index.ts, assets/
├── backend/
│   ├── requirements.txt, pytest.ini, .env.example
│   ├── database/schema.sql
│   ├── app/
│   │   ├── main.py, config.py
│   │   ├── api/   deps.py, routes/{health,itineraries,trips,users}.py
│   │   ├── services/   itinerary_service.py, trip_service.py
│   │   ├── schemas/    itinerary.py, trip.py
│   │   └── db/supabase.py
│   └── tests/   test_health, test_cors, test_itineraries, test_trips
└── design_reference/   UI design screens and component library
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://travel-itinerary-planner-sage.vercel.app
Login Credentials (Demo)	Email: **20programmer28@gmail.com** Password: **Login@123** (or register a new account on the site)
Platform / Hosting Provider	Vercel (frontend), Render (backend), Supabase (auth + database)
Repository Link	https://github.com/ProGraMMer-Parth/travel-itinerary-planner

Step 4: Run Instructions

1. Clone: `git clone https://github.com/ProGraMMer-Parth/travel-itinerary-planner.git`
2. Create a Supabase project and run `backend/database/schema.sql` in the SQL editor.
3. Backend: `cd backend` then `python -m venv .venv` then activate then `pip install -r requirements.txt`.
4. Copy `backend/.env.example` to `.env` and set `SUPABASE_URL`, `SUPABASE_SERVICE_ROLE_KEY`, `GROQ_API_KEY`, `GROQ_MODEL=openai/gpt-oss-120b`, `CORS_ORIGINS`.
5. Start API: `uvicorn app.main:app --reload --host 127.0.0.1 --port 8000` (Swagger at `/docs`).
6. Frontend: `cd frontend` then `npm install`; copy `.env.example` to `.env` and set `VITE_API_URL`, `VITE_SUPABASE_URL`, `VITE_SUPABASE_ANON_KEY`.
7. Run `npm run dev` and open `http://localhost:5173`.
8. Run backend tests: `cd backend && pytest`.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI content may be inaccurate or outdated (hours, prices)	Verify before booking; planned: live data integrations
2	Free Render backend can be slow on the first request	Wait about 30 to 60 seconds and try again; a paid plan avoids this
3	AI generation depends on Groq availability and rate limits	Clear error shown; retry later
4	No booking, maps or live prices	Listed in future roadmap
